SPCA Guardian Pro: Veterinary Staff Guide

Confidential & Proprietary

Version 1.0

Welcome, Veterinary Professionals

This guide is designed specifically for you, the veterinary staff at Makhanda SPCA. It details how to use the system to manage animal health records, schedule appointments, perform treatments, and generate medical reports, ensuring the highest standard of care for our animals.

For technical support, please contact:

1. Getting Started & Logging In

Navigate to the system URL in your web browser.

Enter your unique username and password.

Click Login.

You will be directed to your personalized Veterinary Dashboard.

Forgot Password? Click the "Forgot Password?" link on the login page to reset your credentials by filling in ID and username and recreating a password.

2. The Veterinary Dashboard

Your dashboard is your command center. It provides a quick overview of your daily tasks and critical alerts.

A simplified example of the Vet Dashboard

Key Dashboard Widgets:

Today's Appointments: A list of all scheduled check-ups, procedures, and consultations for the current day.

Treatment Alerts: Notifications for animals requiring urgent care, upcoming vaccinations, or scheduled surgeries (e.g., spay/neuter).

Recent Treatments: A log of the most recent medical procedures you or your team have recorded.

Quick Actions: Shortcut buttons to quickly Add a Treatment or Schedule an Appointment.

3. Core Modules & How To Use Them

3.1. View Animals & Medical History

This is your gateway to the complete medical record of any animal in the facility.

To access an animal's profile:

Click on View Animals in the main navigation menu.

Use the search bar to find an animal by name, ID, species, or breed.

Click on the animal's name to open its Profile Page.

The Animal Profile Contains:

Overview Tab: Basic info (ID, Kennel #, intake date).

Medical History Tab: (Most Important) A chronological timeline of all procedures, medications, and notes. This is the system of record.

Behavioral Notes Tab: Observations from volunteers and staff.

3.2. Appointments

Use this module to manage the veterinary calendar.

To Schedule a New Appointment:

Go to Management > Appointments.

Click Create New Appointment.

Fill out the form:

Select Animal: Search for and select the animal.

Set Date/Time: Choose the date and time for the appointment.

Appointment Type: Select from a dropdown (e.g., "Initial Vaccination," "Post-Op Check," "Health Assessment").

Assigned Vet: Your name will be pre-selected, but you can assign it to another vet.

Notes: Add any pre-appointment notes.

Click Save. The appointment will now appear on the calendar and in your dashboard widget.

3.3. Treatments

This is the core module for recording all medical interventions. This action updates the animal's permanent record.

To Record a New Treatment or Procedure:

Navigate to Management > Treatments.

Click + Add New Treatment.

Click Save & Close.

Important System Rule: The system will prevent an animal from being marked as "Ready for Adoption" in the adoption module if mandatory treatments (e.g., core vaccinations, spay/neuter) are not recorded here.

3.4. Reports

Generate reports to track workload, due dates, and medical history.

To Generate a Report:

Go to the Reports section.

Select the type of report from the dropdown menu.

Set a date range and any other filters.

Click Generate Report.

Common Veterinary Reports:

Vaccination Due Report: Lists all animals with vaccinations due in the next week or month.

Treatment History Report: Provides a detailed log of all procedures for a specific animal or for all animals within a period.

Spay/Neuter Schedule: Lists all animals scheduled for sterilization surgery.

Medication Log: Shows all medications administered within a set timeframe.

4. Key Workflows

4.1. Intake Process for a New Animal

An admin registers the animal, assigning it an ID and kennel.

The system generates a "Needs Initial Assessment" alert on your Vet Dashboard.

You find the animal in View Animals, perform the exam, and record the first Treatment record with type "Health Assessment," noting any issues, parasites, or immediate needs.

4.2. Preparing an Animal for Adoption

Ensure all mandatory procedures are recorded in Treatments:

Health Check

Vaccinations (Core)

Spay/Neuter Surgery

Parasite Control

Once the final required procedure is saved, the system will automatically update the animal's status to allow the admin team to mark it as "Ready for Adoption."

4.3. Managing a Cruelty Case

An admin will create a cruelty case and link it to an animal.

You will be notified or can see notes on the animal's profile.

Perform a thorough examination and document every finding as a Treatment record, even if no medicine is given.

Use the "Notes" section meticulously for legal evidence (e.g., "Photographs taken of wound on left flank," "Emaciated, body condition score 1/5").

5. Frequently Asked Questions (FAQ)

Q: I made a mistake in a treatment record. Can I edit it?

A: Yes. Locate the treatment in the animal's Medical History tab. Click Edit (pencil icon). The system logs that the record was edited for audit purposes.

Q: Can I see appointments for other veterinarians?

A: Yes. The appointment calendar is shared across the veterinary team so everyone can view the clinic's total workload.

Q: An animal is leaving today, but I need to add a note for the new owner. How?

A: Add a final Treatment record with the type "Owner Discharge Notes." Include care instructions, medication schedules, and follow-up needs.

Q: Where do I record a diagnosis?

A: All diagnoses should be recorded in the Notes field of a Treatment record.
